Vireo Audio Support Dashboard — Executive Memo

To: Priya Raman, Head of Customer Experience
Subject: CSAT, handle time and training review — Support Tickets Set B

Executive summary

The export contains 11,750 tickets from January 2025 through June 2026. There are 5,196 CSAT responses (44.2%). Using top-box CSAT (scores 4–5), the overall top-box rate is 45.8%.

Metric	H1 2025	H1 2026	Change
Top-box CSAT	51.8%	41.4%	-10.4pp
Median handle time	26 min	31 min	+5 min
Replacement rate	9.5%	22.3%	+12.7pp
Replacement cost	■3.59 lakh	■22.14 lakh	+■18.55 lakh

The requested raw bottom-ten view is included, but it should not be used alone to allocate the ■4 lakh training budget because the supplied Operations Manager email warns that queue mix can confound comparisons, and the policy says Tier 2 should not be compared with Tier 1 on volume metrics.

Data-quality check

The raw data produced 2,309 negative handle times. The supplied policy explains that reconstructed legacy resolution timestamps come from a UTC event log while helpdesk timestamps are displayed/exported in IST. The analysis adds 5h30 to legacy reconstructed resolution timestamps; negative handle times then fall to zero.

Requested bottom-ten view

Agent	Team	CSAT n	Top-box	Median AHT
Siddharth Kapoor	Chat Frontline	129	31.8%	26m
Vivaan Pandey	Logistics	154	31.8%	1463m
Kavya Pandey	Logistics	159	33.3%	1466m
Divya Tiwari	Returns Desk	106	35.8%	1466m
Geeta Iyer	Logistics	150	37.3%	1466m
Zaid Khanna	Chat Frontline	118	38.1%	25m
Varun Reddy	Returns Desk	121	38.8%	1467m
Siddharth Trivedi	Chat Frontline	120	40.0%	27m
Mohammed Desai	Returns Desk	243	40.7%	1473m
Kavya Pandey	Chat Frontline	142	42.3%	27m

Focused review set

The four Chat Frontline agents in the raw bottom-ten are surfaced for manager review. Across the full period they have 509 CSAT responses and 38.1% top-box CSAT versus 51.2% for Chat Frontline. In H1 2026 they handled 655 tickets, had 31.1% top-box CSAT among 289 responses, and had a 39.4% replacement rate. This is a review set, not an automatic retraining verdict.

Business goal

A practical follow-up target is to reduce the H1 2026 replacement rate for this four-agent review set from 39.4% toward 30% over six months while improving CSAT toward the relevant team benchmark. At their observed replacement-cost mix, this corresponds to approximately ■1.11 lakh of modeled replacement-cost opportunity over six months. This is a scenario, not a causal forecast.

AI / limitations

The working tool uses local TF-IDF + LogisticRegression. On a 300-ticket holdout against the existing intake category it achieved 76.3% accuracy and a 23.7% error rate. That is proxy-label validation, not human gold-label validation. Dissatisfaction-driver and resolution fields require human review. Other limitations include response bias, queue mix, legacy timestamp assumptions, skewed handle time, and the non-causal nature of replacement-cost scenarios.
